

MATHEUS TONON

Full Stack Software Engineer

+5544991788790 @ math.tonon@gmail.com linkedin.com/in/matheustonon Maringá, PR - Brazil

SUMMARY

Full-stack software engineer with a track record of building and maintaining production systems for international remote teams. Angular and .NET are my primary tools, and I'm equally comfortable working with Node.js, React, Next.js, and GCP. I focus on scalable architecture, API design, and reliable data pipelines.

EXPERIENCE

Full Stack Software Engineer (Angular + .NET)

Paid Keeper Inc | Remote

07/2023 - Present New York, USA

- Built and maintained a data ingestion framework integrating multiple HR and payroll providers (Workday, Finch, HHAExchange), transforming complex schemas into a unified internal data model. Supported integrations used by healthcare companies across the United States, ensuring reliable data synchronization for critical business operations
- Designed and operated scalable data pipelines on GCP using Cloud Run, Workflows, Cloud Tasks, and Scheduler to handle large-scale, multi-endpoint sync processes
- Optimized API calls and data processing, improving performance and reducing infrastructure costs on GCP
- Delivered full-stack features across backend (.NET) and frontend (Angular, Next.js), from database design to UI implementation
- Collaborated with product and engineering teams to design and ship integration features in a fast-paced, remote environment

Founding Engineer

Sualmob | Remote

05/2026 - Present Brazil

- Architected a multi-tenant PropTech platform (API, CRM, white-label portals) using FastAPI, Next.js, and Supabase—handling tenant isolation, authentication, and CI/CD across 3 deployed services.
- Built an AI WhatsApp assistant that qualifies leads in real-time using RAG over property catalogs (Gemini embeddings + pgvector), with test evaluation suite ensuring LLM reliability.
- Developed the internal CRM (dashboards, conversations, lead scoring, scheduling, handoff) and tenant-branded public websites with property maps—all served from the same codebase.

SKILLS

Frontend

Angular TypeScript React
Next.js NgRx Tailwind CSS

Backend

.NET Core Express Node.js C#
Python FastAPI Entity Framework

Databases

PostgreSQL Supabase pgvector
SQL Server NoSQL

Cloud & DevOps

Google Cloud Platform (GCP) Docker
Vercel CI/CD (GitHub Actions)

AI & LLMs

RAG (Retrieval-Augmented Generation)
Embeddings Hybrid Search LLM

APIs & Integrations

REST APIs Third-party Integrations
WhatsApp Cloud API Webhooks

Observability & Monitoring

Sentry Structured Logging
Health Checks

Tools

Postman Cypress Git

- Integrated Meta's WhatsApp Cloud API and a Baileys gateway, letting brokers connect personal WhatsApp accounts via QR code from the CRM.
- Established engineering standards and documentation (review guides, Cursor rules, onboarding), while collaborating with founders on the technical roadmap.
- Set up observability with Sentry, structured logging, and health checks-catching issues before users noticed and keeping the platform stable across 3 services."

EDUCATION

Bachelor of Technology - Analysis and Systems Development

Unicesumar

 01/2023 - 12/2025

Bachelor of Engineering - Manufacturing Engineering

UNIVEM

 01/2009 - 12/2013
